1 You (the researcher)

Have a question, task, or goal

Example input:
"Analyze this paper and summarize the key findings, limitations and implications for future research."

2 Chatbot interface

Collects your request and adds other context

Your prompt
what you asked for

+

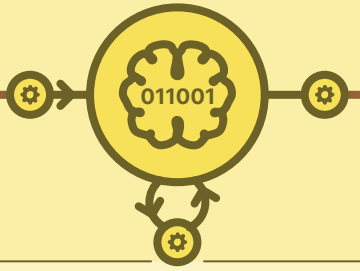
System prompt
reusable instructions for how the AI should

+

Other context
e.g., previous conversation, uploaded files, web search, tool information, system instructions

3 AI model

Processes the information and generates a response



Large Language model
Understands your request, follows the master prompt, uses the context and decides what to do next

4 Chatbot output

You get the result in the chat. It may include text, tables, links, code, or next steps.

Example output:
Here's a summary of the paper including key findings, limitations, and implications for future research:

- Summary
- Key findings
- Limitations
- Implications
- Suggested next steps
